

Ganzlin powder coatings with AMiSTec technology

Zinkmolybdat

The number of infections caused by microorganisms, especially in hospitals, has increased dramatically. Conventional disinfectants only have a brief effect and after just a few minutes there is no longer any protection against repopulation by microorganisms. In combination with AMiSTec technology, Ganzlin Powder coatings offer proven protection against:

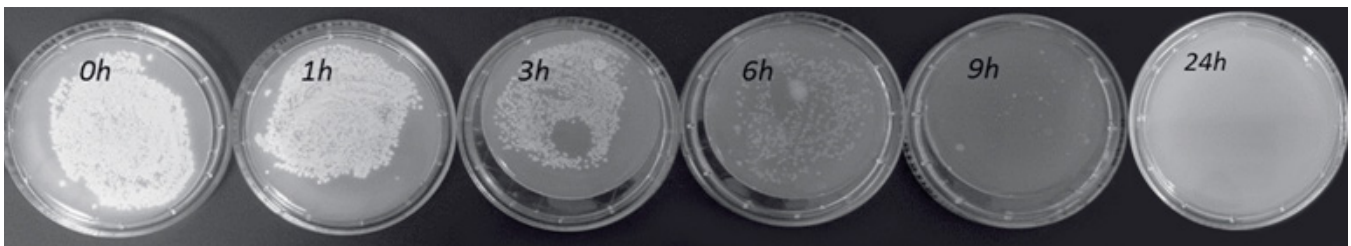

bacteria

resistant germs

viruses

fungi

The new microbiological laboratory at Ganzlin offers modern, high quality technical equipment which includes the development of the product and the quality control. It is also possible to run a direct contact test to give each batch a certification.

ST-7015XSM021 mit *Staphylococcus aureus* abgeklatscht nach 0h, 1h, 3h, 6h, 9h, und 24h

Use

Health care

- hospitals
- medical equipment
- nursing and care homes

Industry

- machinery and equipment
- food technology
- packaging material

Public places

- public transportation
- waiting rooms
- ticket machines

Consumer goods

- household appliances
- sanitary surfaces

- Long term
- In accordance with the internationally standard JIS Z 2801 accepted
- With fall rates of $2.5 - 10 \times 10^5$ to $\leq 2.5 \times 10^2$ within 24 hours
- Gradual percentage of reduction shall 10,000 x wipe test carried out
- Still effective even after 2 years of service
- Formulated in various Ganzlin powder coatings
